

Kernel-Trade Platform

This is a revolutionary investment platform focused on the agricultural industry. The purpose of the platform is to stimulate the development of agricultural enterprises of any scale.

Kernel-Trade is deals with tokenization of agricultural assets of private and state agricultural enterprises of any size. Tokenization takes place on the basis of **KNL token and blockchain** developed by Kernel-Trade based on **Stellar** technologies.

The Kernel-Trade platform allows to:

- Invest in agricultural enterprises on bail in the form of crops, real estate or agricultural land.
- Place their assets on the exchange through Kernel-Trade.

Types of assets that Kernel-Trade allows to tokenize:

- share in the enterprise;
- movable and immovable assets;
- agricultural raw materials.

Asset listing procedure

- Analysis of agricultural companies, which includes:
 - verification of agricultural land
 - conducting legal and business audit
- Selection of the most optimal jurisdiction of the asset;
- Creating a smart contract.

KNL ecosystem components

- Tokens (OAT);
- physical asset;
- Exchange platform Kernel-Trade.

The safety of a physical asset is guaranteed by Kernel-Trade. The project provides with the purchase of its own elevators to store grain crops, as well as the conclusion of partnership agreements with other owners of elevators.

The KNL token is a mean of payment for any operations on the Kernel-Trade exchange platform.

The KNL token will allow its holders to pay exchange fees at reduced rates and receive dividend income from owning assets.

The KNL token is based on the Ethereum blockchain.

On the Kernel-Trade exchange, you will be able to purchase the KNL token from project investors who participated in IEO.

This will become a push for the growth of the value of the service token, regardless of the financial success of the KNL project.
